Career Objective

Broad & Ambitious to build a successful career at the intersection of software development and artificial intelligence by applying strong technical foundations in modern frameworks, full-stack development, and emerging AI technologies, while continuously growing through real-world projects and industry exposure that create meaningful and intelligent digital solutions.

Educational Background

BSc (Hons) Computing with Artificial Intelligent

2024-Present

Islington College

London Metropolitan University

Kamal Marg, Kamalpokhari, Kathmandu

SLC

2024

Kanchanjunga English School

NEB

Birtamod, Jhapa

SEE

2022

Sigma English School

Board

Haldibari-2, Parakhopi, Jhapa

Skills

Technical Skills:

Programming Language: HTML, CSS, Tailwind CSS, JavaScript, MySQL, PHP, Python, Java, Next.js.

Operating System: Windows OS

Tools and Software: VS Code, Git, GitHub, Figma, Chrome DevTools, Illustrator, Canva, PowerBI.

Framework: React

Soft Skills:

Communication
Adaptability
Team Collaboration
Problem-Solving
Time Management

Academic & Personal Projects:

Personal Portfolio

The language used to build the project is HTML, CSS, JavaScript. It is a responsive multi-page personal portfolio website with dark/light theme support, project showcase, CV download, and contact form. Deployed on GitHub Pages with a custom domain.

Extra Life GYM

The language used to build the project is TypeScript, React, Vite. It is a fully functional gym membership website focused on promoting fitness services including strength training, HIIT, yoga, and personal training. Users can browse membership plans (Basic, Pro, Elite), view trainers, check in as members, and sign up or log in through a dedicated portal.

MindWell

The language used to build the project is Java, HTML, CSS. It is a wellness-focused full-stack web application targeted at mental and physical health support in Nepal. Built with a Java backend, it provides users with health-related resources and guidance through a clean and accessible interface.

Times-Watch Store

The language used to build the project is JavaScript, React. It is a modern e-commerce web application focused on selling premium watches online. It features product browsing and a polished storefront UI built with React and Tailwind, backed by a Laravel PHP server for handling data and business logic.

Hyder Ali Advisory Portfolio

The Language used to build the project is TypeScript, React, Vite. It is a professional legal and corporate advisory portfolio website for a Dubai-based law firm, focused on showcasing services in corporate law, family law, real estate, and dispute resolution. Built with TypeScript and React to deliver a polished and responsive client-facing presence.

Northline Estates (Real State)

The language used to build the project is JavaScript, React. It is a luxury real estate advisory website focused on helping users explore properties for buying, selling, and valuation. It presents property listings and neighborhood guidance through a clean, professional interface built with React.

IoT Project: Smart agriculture farming System

Develop an IoT-based smart farming system to automate irrigation and monitor environment conditions. Integrated ESP32 and Blynk for real-time alerts and remote system control.

IoT Project: Smart Bluetooth Control Car

It is made using electronic components like Arduino UNO, Bluetooth HC-05, L293D Motor Driver, DC Motors and LiPo Battery. It is controlled by mobile phone with the help of application and the Bluetooth modules used on the car.
